This file contains a list of links to previous repositories we worked on before we created this unified "Team16" repository. For information of our software development progression before the date of the creation of this repository, please check the following Git links:

https://github.com/ucd2017comp30670/ProjectDB/commits/master

-Contains the all associated files for this project, but due to some errors we decided to start a clean repository for a cleaner and simpler interface.

https://github.com/LukeO1/SE_final/commits/master

-contains the code to the "DataCrawler"

https://github.com/lyycindy/PorjectDB_Team16/commits/master

-contains the code to the "WeatherCrawler"

The reason for including the "Weathercrawler" and the "DataCrawler" in 2 separate Git repositories was because of a technical issue with the pip install and setup functions. After some trial and errors of installing the 2 programs, we realised that the errors were occurring due to the nature of the pip install function. The function looks a setup.py files in the folder but this setup.py file must be located at the 1st level of the file tree for the pip to work. And because we had 2 separate programs to install that required 2 separate setup.py files. So, in the end we created 2 separate repositories to facilitate to this and that is the reason for our extensive amount of previous Git repositories.
